Introduction

The Associate Degree in this AVMA fully-accredited program will prepare students for immediate employment in veterinary offices, biological research facilities, drug and feed manufacturing companies, and in the animal production industry. The objective of this program is to provide the classroom, laboratory, and field experience that will prepare students to be job entry-level competent in all of the above, with a special focus on companion animal medicine and practice. The NCCC Veterinary Technology Program promotes graduate success through a combination of challenging studies, extensive on-site hands-on learning opportunities, affiliations with off-site veterinary clinics, and continued emphasis on the need for lifelong learning.

After completing the Associate Degree program, eligible students have the option of transferring to the College of Agriculture and Natural Resources at the University of Connecticut to major in either Animal Science or Pathobiology.

Students seeking transfer from another Veterinary Technology Program will be considered on an individual basis and are not guaranteed acceptance.

Program Academic Requirements

Enrollment into the Veterinary Technology Program is in the fall only, as most courses must be taken in sequence. Once enrolled, students may attend the NCCC Vet Tech Program on either a full-time or part-time basis. Full-time students can complete the program in two academic years (including a summer semester). Part-time students must complete all the program Veterinary Technology and Biology (VET* and BIO* designated) courses within a **five-year time frame**. **Students must apply and be formally accepted into the Veterinary Technology Program in order to register for VET* designated courses at NCCC.**

Once enrolled in the program, a minimum grade of "C" (2.00) is required in all VET* designated courses. Students that earn a grade of "C-" or lower, including grades of "W", will only be allowed to repeat a class one time. Students who do not earn an acceptable grade of "C" after two attempts at a VET* designated course will be dropped from the NCCC Veterinary Technology Program.

The NCCC Veterinary Technology Program is time intensive. Full-time students should expect to spend 17-24 hours per week in class, and 3 hours of preparation (reading, studying, completing assignments and projects) for each hour spent in class. Several classes require student participation in animal care rotations, and it is the student's responsibility to perform that care even if they are not otherwise scheduled to be in class that day. In addition, the program requires completion of two off-campus externships of 150 and 180 hours, respectively.

Program Health / Vaccination Requirements

For any VET* designated courses numbered 150 or higher (excluding VET* 201 & VET* 202), a health assessment and rabies vaccination status form are required. These forms will be provided to applicants upon their acceptance to the program.

As part of the Health Assessment, students must be declared to be in overall good health, test negative for tuberculosis, and must be capable of lifting a minimum of 50 lbs from the ground. It is strongly advised that all students be current on their tetanus vaccination.

Pre-exposure rabies vaccination is **STRONGLY RECOMMENDED** for student protection because, for clinical labs, the NCCC Veterinary Technology program utilizes shelter animals for which vaccination history is frequently unknown. Failure to complete the Rabies Vaccination series may limit the student's ability to progress through the program in a timely manner.

Clinical labs also present hazards for veterinary technology students including, but not limited to, injury related to animal handling, exposure to diagnostic radiation, exposure to gas anesthetic agents, and exposure to zoonotic diseases (transmissible from animals to humans). These hazards are of particular concern during pregnancy. NCCC will not accept liability if a student chooses to disregard these possible hazards during pregnancy. Therefore, pregnant students may only participate in clinical labs as permitted by their personal physicians/care provider.

Approximate Costs

Current detailed tuition rates are available at <http://www.ct.edu/admission/tuition>.

As of the Fall 2019 Semester, the estimated total cost of tuition and college fees for an in-state, full-time student completing the program in two years is approximately \$14,000 (including summer courses and program prerequisites). Total costs will be higher for part-time students, out-of-state students, and students required to repeat courses due to poor academic performance.

It is recommended that students purchase and keep their textbooks (as opposed to renting them or selling them back to a bookstore after course completion) because many of them will provide good references for the duration of their studies and career. Also, students are required to purchase and wear scrubs for their clinical labs. Students often choose to purchase personal equipment such as a stethoscope during their studies. Students should expect a cost of approximately \$3,000 for textbooks, scrubs, and other supplies over the course of the program.

The cost of the required health physical and rabies vaccination is estimated at \$1,200. The rabies vaccinations cost approximately \$300 per dose and three doses are required to complete the pre-exposure series. Students are encouraged to check with their personal health insurance provider to determine if the health physical and rabies vaccination expenses qualify for insurance coverage.

Veterinary Technician National Exam (VTNE)

Students who receive an Associate of Science Degree in Veterinary Technology from NCCC are qualified to sit for the VTNE. The VTNE is used to evaluate entry-level veterinary technicians' competency to practice and to be credentialed.

Veterinary technician credentialing is currently optional (i.e., not legally required) in the State of Connecticut. However, credentialing is legally required for veterinary technicians in the majority (37 out of 50 states) of the USA and voluntarily encouraged in 10 other states. Because the VTNE is used as a part of either required or voluntary credentialing in all but 3 US states or territories (including CT), NCCC **strongly** encourages its Veterinary Technology graduates to sit for the VTNE soon after graduation. Obtaining a passing score on the VTNE gives graduates the flexibility to obtain certification and employment in other states, besides CT.

Students seeking more information regarding the national board exam and veterinary technician credentialing should visit www.navta.net.
